

Hi Peter,

I've evaluated your project and you got a grade of: A

Great job!

Some feedback and suggestions for improvement:

- if you had used numbers for the answers, then you could have had a total (adding values of all answers), and then used if-elseif structure to have a more flexible/varied answer

It was great having you in class. Thanks for your participation.

Eli

PS: I'll send you a link-in invite or you can link-in to me via elev007@gmail.com. If you liked the class, I'd appreciate a link-in recommendation.

If you're not sure how to do this - I created 2 quick pdfs that explain the steps (you can also find them in class folder):

-> how to connect to me via Linked-In: https://www.dropbox.com/s/nlzkwbrbbdvtnss/linkedin.how_to_send_invite.pdf?dl=0

-> how to send me a recommendation via Linked-In: https://www.dropbox.com/s/wzrgci9upfmmp4c/linkedin.recommendation_steps.pdf?dl=0

I have replicated the functionality of https://www.emailsanta.com/naughty_nice.asp? with all four questions and three drop down answers each. I have not copied source code from view-source (mostly JAVA Script) unless stated when I have encountered a problem with the country setting. The challenges file describes in detail my way of proceeding and the problems I have encountered.
